**Biology: How Life Works** By James Morris, Daniel Hartl, Andrew Knoll, Robert Lue, Andrew Berry, Andrew Biewener, Brian Farrell, N. Michele Holbrook, Naomi Pierce, Alain Viel

**Rethinking biology means rethinking the text, the visual program, and assessment.**

Ordinarily, textbooks are developed by first writing chapters, then making decisions about art and images, and finally, once the book is complete, assembling a test bank and ancillary media. This process dramatically limits the integration across resources, and reduces art, media, and assessments to ancillary material, rather than essential resources for student learning.

*Biology: How Life Works* is the first project to develop three pillars—the text, the visual program, and the assessment—at the same time. All three pillars were developed in parallel to make sure that each idea is addressed in the most appropriate medium, and to ensure authentic integration. These three pillars are all tied to the same set of core concepts, share a common language, and use the same visual palette. In this way, the text, visual program, and assessments are integral parts of student learning, rather than just accessories to the text.

### RETHINKING THE TEXT

#### **Integrated**

*Biology: How Life Works* moves away from a focus on disparate topics, towards an integrated approach. Chemistry is presented in context, structure and function are covered together, the flow of information in a cell is introduced where it makes the most conceptual sense, and cases serve as a framework for connecting and assimilating information.

#### **Selective**

*Biology: How Life Works* was envisioned not as a reference book for all of biology, but a resource focused on foundational concepts, terms, and experiments. This allows students to more easily identify, understand, and apply critical concepts, and develop a framework on which to build their understanding

of biology.

### **Thematic**

*Biology: How Life Works* was written with six themes in mind. Introduced in Chapter 1 and revisited throughout, these themes provide a framework that helps students see biology as a set of connected concepts. In particular, the theme of evolution is emphasized for its ability to explain and predict so many patterns in biology.

## **RETHINKING THE VISUAL PROGRAM**

### **Integrated**

Across *Biology: How Life Works*—whether students are looking at a figure in the book, watching an animation, or interacting with a simulation—they always see a consistent use of color, shapes, and design.

### **Engaging**

Every image—still and in motion—engages students by being vibrant, clear, and approachable. The result is a visual environment that is expertly designed to pull students in, deepens their interest, and helps them see a world of biological processes.

### **A Visual Framework**

To help students think like biologists, the visual program is designed to be a framework for students to hang the concepts and connect ideas. Individual figures present foundational concepts; Visual Synthesis figures tie multiple concepts across chapters together; animations bring these figures to life; and simulations let students interact with the concepts. Collectively, this visual framework allows students to move seamlessly back and forth between the big picture and the details.

## **RETHINKING THE ASSESSMENT**

### **Range**

Developed by a broad community of leading science educators, the assessments for *Biology: How Life Works* address all types of learning, from recall to synthesis. They are designed to be used in a variety of settings and come in a wide range of formats (multiple choice, true/false, free response).

### **Integrated**

Assessment is seamlessly integrated into the text and the visual program (both in print and interactive). Each time an instructor asks a student to engage with *Biology: How Life Works*—whether it is reading a chapter, watching an animation, or working through an experiment—the opportunity to assess that experience exists.

### **Connected**

Many of the questions and activities for *Biology: How Life Works* are organized in sets called Progressions. Questions in a Progression are aligned with one or more core concepts, and are designed to move a student from basic knowledge to higher order skills and deeper understanding. Progressions questions can be used

individually or in a series as pre-class quizzes, in-class clicker questions or activities, post-class homework, or exams. When used in sequence, Progressions provide a connected learning path for students.

## **Editorial Review**

### About the Author

James R. Morris is Associate Professor in the Biology Department at Brandeis University. He teaches a wide variety of courses for majors and non-majors in evolution, genetics, genomics, anatomy, and health sciences. In addition, he teaches a first-year seminar focusing on Darwin's "On the Origin of Species." He is the recipient of numerous teaching awards from Harvard and Brandeis. His research focuses on the rapidly growing field of epigenetics, making use of the fruit fly "*Drosophila melanogaster*" as a model organism. He currently pursues this research with undergraduates in order to give them the opportunity to do genuine, laboratory-based research early in their scientific careers. Dr. Morris received a Ph.D. in genetics from Harvard University and an M.D. from Harvard Medical School. In addition, he was a Junior Fellow in the Society of Fellows at Harvard University, gave talks to the public on current science at the Museum of Science in Boston, and works on promoting public understanding of personal genetics and genomics.

Daniel L. Hartl is the Higgins Professor of Biology in the Department of Organismic and Evolutionary Biology at Harvard University. He has taught highly popular courses in genetics and evolution at the introductory and advanced levels. His lab studies molecular evolutionary genetics and population genetics and genomics. Dr. Hartl is the recipient of the Samuel Weiner Outstanding Scholar Award and the Medal of the Stazione Zoologica Anton Dohm Naples. He is a member of the National Academy of Sciences and the American Academy of Arts and Sciences. He has served as President of the Genetics Society of America and President of the Society for Molecular Biology and Evolution. Dr. Hartl's Ph.D. was awarded by the University of Wisconsin, and he did post-doctoral studies at the University of California, Berkeley. Prior to joining the Harvard faculty, he served on the faculties of the University of Minnesota, Purdue University, and Washington University Medical School. In addition to publishing more than 350 scientific articles, Dr. Hartl has authored or coauthored 30 books.

Andrew H. Knoll is the Fisher Professor of Natural History in the Department of Organismic and Evolutionary Biology at Harvard University. He is also Professor of Earth and Planetary Sciences. Dr. Knoll teaches introductory courses in both departments. His research focuses on the early evolution of life, Precambrian environmental history, and the interconnections between the two. He has also worked extensively on the early evolution of animals, mass extinction, and plant evolution. He currently serves on the science team for NASA's mission to Mars. Dr. Knoll received the Phi Beta Kappa Book Award in Science for "Life on a Young Planet." Other honors include the Paleontological Society Medal and Wollaston Medal of the Geological Society, London. He is a member of the National Academy of Sciences, the American Academy of Arts and Sciences, and the American Philosophical Society. He received his Ph.D. from Harvard University and then taught at Oberlin College before returning to Harvard.

Robert A. Lue is Professor in the Department of Molecular and Cellular Biology and Director of Life Science Education at Harvard University. He regularly teaches in Harvard's first-year Life Sciences program and upper-level courses in cell biology. He has a longstanding commitment to interdisciplinary teaching and research, and chaired the faculty committee that developed an integrated science course to serve multiple science majors and premedical students. Dr. Lue has also developed award-winning multimedia, including the animation "The Inner Life of the Cell." He has coauthored undergraduate biology textbooks and chaired education conferences on college biology for the National Academies and the National Science Foundation,

and diversity in science for the Howard Hughes Medical Institute and the National Institutes of Health. He also founded and directs a Harvard life sciences outreach program that serves over fifty high schools. He received his Ph.D. from Harvard University."

## **Users Review**

### **From reader reviews:**

#### **Lori Johnson:**

The book Biology: How Life Works can give more knowledge and also the precise product information about everything you want. Why must we leave the good thing like a book Biology: How Life Works? Wide variety you have a different opinion about publication. But one aim this book can give many info for us. It is absolutely right. Right now, try to closer along with your book. Knowledge or data that you take for that, you could give for each other; you could share all of these. Book Biology: How Life Works has simple shape nevertheless, you know: it has great and big function for you. You can look the enormous world by available and read a book. So it is very wonderful.

#### **Carla Floyd:**

As people who live in the actual modest era should be change about what going on or info even knowledge to make them keep up with the era which can be always change and progress. Some of you maybe can update themselves by reading through books. It is a good choice for yourself but the problems coming to you is you don't know what type you should start with. This Biology: How Life Works is our recommendation to help you keep up with the world. Why, because this book serves what you want and wish in this era.

#### **Ella Carlson:**

This book untitled Biology: How Life Works to be one of several books that best seller in this year, this is because when you read this reserve you can get a lot of benefit in it. You will easily to buy this kind of book in the book shop or you can order it through online. The publisher with this book sells the e-book too. It makes you quickly to read this book, since you can read this book in your Cell phone. So there is no reason to you personally to past this e-book from your list.

#### **Douglas Brim:**

You can spend your free time to learn this book this guide. This Biology: How Life Works is simple to bring you can read it in the park your car, in the beach, train as well as soon. If you did not possess much space to bring typically the printed book, you can buy the actual e-book. It is make you simpler to read it. You can save the particular book in your smart phone. Therefore there are a lot of benefits that you will get when you buy this book.
