**Roadside Geology of Nebraska (Roadside Geology Series)** By Harmon D., Jr. Maher

Nebraska's geology is as exciting as the Cornhuskers. The state hosts boiling riverbeds, puzzling fossil beds, and sandstone toadstools, not to mention a now dormant sea of sand that once moved fast enough to dam rivers; and these Sand Hills could be on the march again as the global climate warms. Changing climate influenced much of Nebraska's geology, from the waxing and waning of continental glaciers to the extinction of some of Nebraska's former inhabitants. You'll discover badlands, braided rivers, fossil rhinos entombed in volcanic ash, and the largest dune field in the Western Hemisphere.

### **Editorial Review**

#### **Review**

"Road by road and mile by mile, the Nebraska guide covers the entire state, locating and describing geologic features. Some are as large as Chimney rock, the Sand Hills and Scotts Bluff. Others are as subtle as a patch of churned earth caused by a meteor strike in what is now Iowa that kicked up the shallow sea and its sediment that then covered part of Nebraska." --Gerald Wade, Omaha World-Herald

#### **About the Author**

When he is not teaching, kayaking, or spending time with his family, Harmon Maher studies the tectonic history of Svalbard, a group of islands in the Arctic Ocean.

### **Users Review**

#### **From reader reviews:**

##### **Joann Hamilton:**

What do you think of book? It is just for students since they're still students or it for all people in the world, exactly what the best subject for that?
