The Origin of Species: Large Print Edition By Charles Darwin

An immensely readable and informative work of scientific literature, **The Origin of Species** by Charles Darwin was originally published on 24 November 1859. Darwin's work is the foundation of evolutionary biology. This book introduces the scientific theory that populations evolve over the course of generations through a process of natural selection. It presents evidence that the diversity of life arose by common descent through a branching pattern of evolution. In **The Origin of Species**, Darwin includes evidence that was gathered on the Beagle expedition in the 1830s and his subsequent findings from research, correspondence, and experimentation.

This large print edition of Darwin's "Origin of Species" is printed on high quality paper in an easy-to-read format. The beautiful cover will look great in every collection. It is a valuable resource for all scientists and scholars.

From the Inside Flap

Perhaps the most readable and accessible of the great works of scientific imagination, *The Origin of Species* sold out on the day it was published in 1859. Theologians quickly labeled Charles Darwin the most dangerous man in England, and, as the Saturday Review noted, the uproar over the book quickly "passed beyond the bounds of the study and lecture-room into the drawing-room and the public street." Yet, after reading it, Darwin's friend and colleague T. H. Huxley had a different reaction: "How extremely stupid not to have thought of that."

Based largely on Darwin's experience as a naturalist while on a five-year voyage aboard H.M.S. Beagle, *The Origin of Species* set forth a theory of evolution and natural selection that challenged contemporary beliefs about divine providence and the immutability of species. A landmark contribution to philosophical and scientific thought, this edition also includes an introductory historical sketch and a glossary Darwin later added to the original text.

Charles Darwin grew up considered, by his own account, "a very ordinary boy, rather below the common standard of intellect." A quirk of fate kept him from the career his father had deemed appropriate--that of a country parson--when a botanist recommended Darwin for an appointment as a naturalist aboard H.M.S. Beagle from 1831 to 1836. Darwin is also the author of the five-volume work *Zoology of the Voyage of the Beagle* (1839) and *The Descent of Man* (1871).
