Editorial Review

Review

"...a book so generous with its gifts." . . . "The overall intelligence of the book, its complete command of contemporary neuroscience and ability to link this knowledge with the clinical action of the drugs make it a required reading for anyone who wants to understand neuropharmacology and the neuroscience of the normal and diseased brain. The book will not only inform the students, but will encourage the union of clinical understanding and basic biology, which its distinguished authors so ably represent." (*Nature Neuroscience* 2001-08-01)

About the Author

Eric J. Nestler, MD is Professor and Chairman of the Department of Psychiatry and the Center for Basic Neuroscience at the Southwestern Medical School, Graduate School of Biomedical Sciences, Dallas Texas. He is also the Lou and Ellen McGinley Distinguished Chair in Psychiatric Research. The goal of Dr. Nestler's research is to better understand the ways in which the brain responds to repeated perturbations under normal and pathological conditions. A major focus of the research is drug addiction: to identify molecular changes that drugs of abuse produce in the brain to cause addiction, and to characterize the genetic and environmental factors that determine individual differences in the ability of the drugs to produce these changes. A related interest is to understand the contribution of the brain's reward regions to the regulation of normal mood as well as the abnormalities in mood and motivation seen in depression. Dr. Nestler has authored or edited 5 books, and has authored or co-authored 180 original research articles and 90 review articles and book chapters. He currently mentors seven post-doctoral fellows and six graduate students. He has trained 27 post-doctoral researchers, eight research track residents, and ten graduate students. Dr. Nestler is the recipient of numerous awards and honors, including the Pfizer Scholars Award (1987), Sloan Research Fellowship (1987), McKnight Scholar Award (1989), Efron Award of the American College of Neuropsychopharmacology (1994), and Pasarow Foundation Award for Neuropsychiatric Research (1998). He has served on the Board of Scientific Counselors of the National Institute on Drug Abuse, and currently serves on the Scientific Advisory Boards of the National Alliance for Research in Schizophrenia and Depression and of the National Alliance for Autism Research. Dr. Nestler is also a member of the National Advisory Mental Health Council, the Council of the Society for Neuroscience, and the Council of the American College of Neuropsychopharmacology

Steven E. Hyman, MD is Provost of Harvard University and Professor of Neurobiology at Harvard Medical School, Boston, MA. From 1996 to 2001, he served as Director of the National Institute of Mental Health (NIMH), the component of the US National Institutes of Health charged with generating the knowledge needed to understand and treat mental illness. Before serving as Director of NIMH, Dr. Hyman was Professor of Psychiatry at Harvard Medical School, Director of Psychiatry Research at Massachusetts General Hospital, and the first faculty Director of Harvard University's Mind, Brain, and Behavior Initiative. In the laboratory he studied the molecular biology of neurotransmitter action. Dr. Hyman is a member of the Institute of Medicine of the National Academy of Sciences and of the American Academy of Arts and Sciences. He is currently serves as Editor of the Annual Review of Neuroscience. He received his BA from Yale College in 1974 summa cum laude, and his MA from the University of Cambridge in 1976, which he attended as a Mellon fellow studying the history and philosophy of science. He earned his MD from Harvard Medical School in 1980.

Robert C. Malenka, MD, PhD is Pritzker Professor of Psychiatry And Behavioral Sciences at Stanford

University, Palo Alto, CA. He is a fellow of the American Academy of Arts and Sciences, a member of the Institute of Medicine of the National Academies and an Associate of the Neurosciences Research Program. He has won several awards including the International Prize in Neuroscience, the Distinguished Alumni Award from Stanford University and the Daniel Efron Award from the American College of Neuropsychopharmacology. A major goal of his laboratory is to elucidate both the specific molecular events that are responsible for the triggering of these various forms of synaptic plasticity and the exact modifications in synaptic proteins that are responsible for the observed, long-lasting changes in synaptic efficacy.

From reader reviews:

Danny Whittemore:

What do you consider book? It is just for students since they are still students or this for all people in the world, the actual best subject for that? Just simply you can be answered for that issue above. Every person has different personality and hobby for every other. Don't to be obligated someone or something that they don't want do that. You must know how great along with important the book Molecular Basis of Neuropharmacology: A Foundation for Clinical Neuroscience. All type of book would you see on many options. You can look for the internet sources or other social media.

Paul Eastman:

This Molecular Basis of Neuropharmacology: A Foundation for Clinical Neuroscience usually are reliable for you who want to certainly be a successful person, why. The explanation of this Molecular Basis of Neuropharmacology: A Foundation for Clinical Neuroscience can be on the list of great books you must have is definitely giving you more than just simple looking at food but feed an individual with information that probably will shock your prior knowledge. This book is definitely handy, you can bring it just about everywhere and whenever your conditions at e-book and printed versions. Beside that this Molecular Basis of Neuropharmacology: A Foundation for Clinical Neuroscience giving you an enormous of experience such as rich vocabulary, giving you trial run of critical thinking that we understand it useful in your day task. So , let's have it and revel in reading.

Lynn Jones:

Spent a free a chance to be fun activity to complete! A lot of people spent their spare time with their family, or their particular friends. Do you wish to something different to fill your own free time/ holiday? May be reading a book could be option to fill your free of charge time/ holiday. The first thing that you'll ask may be what kinds of guide that you should read. If you want to attempt look for book, may be the reserve untitled Molecular Basis of Neuropharmacology: A Foundation for Clinical Neuroscience can be very good book to read. May be it can be best activity to you.

Dorothy Stanek:

On this era which is the greater man or woman or who has ability to do something more are more special than other. Do you want to become one of it? It is just simple solution to have that. What you are related is just spending your time not very much but quite enough to possess a look at some books. One of many books in the top collection in your reading list is usually Molecular Basis of Neuropharmacology: A Foundation for Clinical Neuroscience. This book which is qualified as The Hungry Slopes can get you closer in turning into precious person. By looking upwards and review this book you can get many advantages.
