Atlas of Inherited Metabolic Diseases 3E By William L Nyhan, Georg F. Hoffman, Bruce A Barshop, Aida I Al-Aqeel

In a field where even experts may find that years have elapsed since they last encountered a child with a given disorder, it is essential for the clinician to have a comprehensive source of practical and highly illustrated information covering the whole spectrum of metabolic disease to refer to. The third edition of this highly regarded book, authored by three of the foremost authorities in pediatric metabolic medicine, fulfills this need by providing an invaluable insight into the problems associated with metabolic diseases.

The Atlas of Metabolic Disease is divided into sections of related disorders, such as disorders of amino acid metabolism, lipid storage disorders and mitochondrial diseases, with an introductory outline where appropriate summarizing the biochemical features and general management issues. Within sections each chapter deals with an individual disease, starting with a useful summary of major phenotypic expression and including clear and helpful biochemical pathways, identifying for the reader exactly where the defect is occurring.

Throughout the book, plentiful photographs, often showing extremely rare disorders, are an invaluable aid to diagnosis.

Editorial Review

Review

" This text is well organized, and easy to read. The photographs and illustrations are excellent ... the authors have done an exemplary job in producing a text of great value to those for whom it was written - it deserves a place in the library of any institution treating critically ill children." Annals RCPSC (April 2000)

About the Author

W.L. Nyhan, Professor of Pediatrics, Department of Pediatrics, Division of Biochemical Genetics, University of California. P.T. Ozand, Head, Section of Inborn Errors of Metabolism, Department of Pediatrics, King Faisal Specialist Hospital and Research Centre.

Users Review

From reader reviews:

Homer Douglas:
