Human Energy Fields: A New Science and Medicine By Colin A. Ross, M.D.

In *Human Energy Fields*, Dr. Ross describes a hard science and medicine with applications, testable hypotheses, and instrumentation. The core proposition of the science is: the human energy field, called chi, the human aura, the life force, or the human spirit in different philosophical systems, and the electromagnetic field of the body are the same thing. Dr. Ross outlines practical applications of the science in many different fields including anthropology, medicine, agriculture, weapons development, security systems, physiology, and psychotherapy. He describes three specific devices that can be used in the study of human energy fields, and proves scientifically that, in one specific instance, western science is wrong about what is scientific and what is paranormal (contrary to western science, the human eyebeam is real).
