Python Machine Learning

By Sebastian Raschka

Python Machine Learning By Sebastian Raschka

Unlock deeper insights into Machine Leaning with this vital guide to cutting-edge predictive analytics

About This Book

- Leverage Python's most powerful open-source libraries for deep learning, data wrangling, and data visualization
- Learn effective strategies and best practices to improve and optimize machine learning systems and algorithms
- Ask – and answer – tough questions of your data with robust statistical models, built for a range of datasets

Who This Book Is For

If you want to find out how to use Python to start answering critical questions of your data, pick up Python Machine Learning – whether you want to get started from scratch or want to extend your data science knowledge, this is an essential and unmissable resource.

What You Will Learn

- Explore how to use different machine learning models to ask different questions of your data
- Learn how to build neural networks using Keras and Theano
- Find out how to write clean and elegant Python code that will optimize the strength of your algorithms
- Discover how to embed your machine learning model in a web application for increased accessibility
- Predict continuous target outcomes using regression analysis
- Uncover hidden patterns and structures in data with clustering
- Organize data using effective pre-processing techniques
- Get to grips with sentiment analysis to delve deeper into textual and social media data

In Detail

Machine learning and predictive analytics are transforming the way businesses and other organizations operate. Being able to understand trends and patterns in complex data is critical to success, becoming one of the key strategies for unlocking growth in a challenging contemporary marketplace. Python can help you deliver key insights into your data – its unique capabilities as a language let you build sophisticated algorithms and statistical models that can reveal new perspectives and answer key questions that are vital for success.

Python Machine Learning gives you access to the world of predictive analytics and demonstrates why Python is one of the world's leading data science languages. If you want to ask better questions of data, or need to improve and extend the capabilities of your machine learning systems, this practical data science book is invaluable. Covering a wide range of powerful Python libraries, including scikit-learn, Theano, and Keras, and featuring guidance and tips on everything from sentiment analysis to neural networks, you'll soon be able to answer some of the most important questions facing you and your organization.

Style and approach

Python Machine Learning connects the fundamental theoretical principles behind machine learning to their practical application in a way that focuses you on asking and answering the right questions. It walks you through the key elements of Python and its powerful machine learning libraries, while demonstrating how to get to grips with a range of statistical models.

About the Author

Sebastian Raschka

Sebastian Raschka is a PhD student at Michigan State University, who develops new computational methods in the field of computational biology. He has been ranked as the number one most influential data scientist on GitHub by Analytics Vidhya. He has a yearlong experience in Python programming and he has conducted several seminars on the practical applications of data science and machine learning. Talking and writing about data science, machine learning, and Python really motivated Sebastian to write this book in order to help people develop data-driven solutions without necessarily needing to have a machine learning background. He has also actively contributed to open source projects and methods that he implemented, which are now successfully used in machine learning competitions, such as Kaggle. In his free time, he works on models for sports predictions, and if he is not in front of the computer, he enjoys playing sports.

Users Review

From reader reviews:

Rose Sosa:

Book is to be different for each grade. Book for children until adult are different content. As it is known to us that book is very important normally. The book Python Machine Learning has been making you to know about other understanding and of course you can take more information. It doesn't matter what advantages for you. The book Python Machine Learning is not only giving you much more new information but also for being your friend when you experience bored. You can spend your own spend time to read your reserve. Try to make relationship together with the book Python Machine Learning. You never sense lose out for everything in the event you read some books.

John Burns:

Now a day people that Living in the era exactly where everything reachable by talk with the internet and the resources included can be true or not involve people to be aware of each information they get. How many people to be smart in getting any information nowadays? Of course the solution is reading a book. Reading through a book can help individuals out of this uncertainty Information especially this Python Machine Learning book because book offers you rich data and knowledge. Of course the knowledge in this book hundred pct guarantees there is no doubt in it you probably know this.

Carol Smith:

Reading can called imagination hangout, why? Because while you are reading a book particularly book entitled Python Machine Learning the mind will drift away trough every dimension, wandering in each aspect that maybe unknown for but surely can become your mind friends. Imaging each word written in a

publication then become one application form conclusion and explanation in which maybe you never get just before. The Python Machine Learning giving you a different experience more than blown away your mind but also giving you useful details for your better life in this particular era. So now let us demonstrate the relaxing pattern the following is your body and mind will likely be pleased when you are finished looking at it, like winning an activity. Do you want to try this extraordinary wasting spare time activity?

Catherine Graziani:

Is it you who having spare time then spend it whole day by means of watching television programs or just telling lies on the bed? Do you need something new? This Python Machine Learning can be the solution, oh how comes? A fresh book you know. You are so out of date, spending your time by reading in this new era is common not a nerd activity. So what these books have than the others?
