

## Analytical Methods for Coal and Coal Products: Volume II: v. 2

From Academic Press

### Analytical Methods for Coal and Coal Products: Volume II: v. 2 From Academic Press

Analytical Methods for Coal and Coal Products, Volume II, aims to provide a detailed presentation of what constitutes the first comprehensive reference work devoted exclusively to the subject of analytical methodology for coal and coal products. The various chapters have been arranged according to either a specific coal process or a specific coal use problem. The topics discussed include the structure of coal and coal products, minerals in coal, coal carbonization products, and coal combustion products.

The general philosophy of this work is to strike a balance between sophisticated analyses based on expensive instrumentation such as mass or nuclear magnetic resonance spectrometers, and the more common, less expensive equipment typically employed in the standard methods. Likewise there is an attempt to strike a balance between the expertise available from within the United States and that found in other countries, offering a broader viewpoint. Altogether, a large number of cross references have been entered in these chapters to enable the reader to make maximum use of pertinent information in all of the chapters.
